

POST-SURGICAL CARE

PRECISION RECOVERY & PATIENT INSIGHTS WEARABLE

RECOVERY OPTION

- Real-time Patient Monitoring
- Reduces Costs & Improve Resource Allocation
- Identify Risks Early & Help Avoid Unnecessary Readmissions
- Automate Data Collection & Reporting
- Enhance Patient Engagement
- Peer Reviewed Protocols

PROVIDERS AND PATIENT CARE

Tracpatch helps providers and patients engage in real-time communication, encourages patient compliance, contributing to a more consistent recovery experience.

IMPROVED PATIENT COMPLIANCE

By tracking range of motion, steps, and adherence to prescribed exercises, TracPatch encourages patients to stay on track.

COST REDUCTION: Better outcomes = fewer extended care needs, rehab visits, or downstream interventions, Fewer In-office Visits. Has remote monitoring capability. Clinicians can manage recovery virtually.

REDUCING COSTS

TracPatch helps reduce costs for Value-Based Care (VBC) programs by enabling more efficient, proactive, and personalized post-operative care.

COST REDUCTION: Empowers providers with actionable data to support timely clinical decisions – potentially reducing unnecessary utilization of high-cost care.

DATA-DRIVEN CARE PATHWAYS

TracPatch provides real-time data that can help optimize care protocols and standardize recovery milestones across patient populations.

COST REDUCTION: Eliminates wasteful practices, tailors resources to high-risk patients, and boosts care team efficiency.

EARLY DETECTION

TracPatch continuously monitors patient movement and activity after surgeries. Detect complications, stiffness, infection, or non-compliance. Providers can intervene before these issues become costly readmissions or surgical revisions.

COST REDUCTION: Fewer emergency visits, readmissions, and surgical revisions.

IMPROVED OUTCOMES

A VBC Priority: High clinical quality at a lower cost. Providers are held to a target price and measured on patient outcomes. TracPatch supports better functional recovery and patient engagement, which can contribute to improved PROMs and patient satisfaction. These factors may help providers **INCREASE SAVINGS** and reduce variation in care delivery.
